Infratrol Ships Multi-Pass Powder Cure Oven

Mike Blumberg, Vice President of Sales at Infratrol Manufacturing, today announced shipment of an unusual oven made especially for powder coat curing – unusual because the oven has an enclosed track monorail conveyor system.

The three-pass oven includes a side entrance and end exit point for easy access and 360° visibility.

“It has a minimal footprint, and a cure temperature of 400 degrees,” says Blumberg. “The system was built especially to powder coat medical laboratory components.”

Infratrol designs and builds engineered-to-order industrial continuous ovens, industrial powder coating and painting systems, and industrial parts washers.
